

Notice of Application for Extension

ZooShare Biogas Co-operative Inc. has applied to extend its Renewable Energy Approval to construct an Anaerobic Digester on Toronto Zoo property in the area of the existing composting operation, which is to be phased out. The project consists of one sealed digester tank; one large sealed storage tank; several smaller processing tanks, a control building and a containerized 500 kW generator. The electricity produced from the organic waste will be sold to the power grid.

Additional information about the project, including the original Renewable Energy Approval and related reports, can be found at www.zooshare.ca. For further information you may also contact:
