

# Notice of Project Change

---

ZooShare Biogas Co-operative Inc. has made some updates to the design of its Anaerobic Digester being constructed on Toronto Zoo property in the area of the existing composting operation, which is to be phased out. The project still consists of one sealed digester tank; one large sealed storage tank; several smaller processing tanks, a control building and a containerized 500 kW generator. The electricity produced from the organic waste will be sold to the power grid.

Additional information about the project, including the original Renewable Energy Approval and related reports (including updates), can be found at [www.zooshare.ca](http://www.zooshare.ca). For further information you may also contact:
